Okay, when you have a minute. Filter question for ASTM 3053 testing. The time between the end of the high fire and the start of the low fire was 18 minutes – very quick turnaround for multiple filter changes and leak checks. Even with multiple heat lamps on the filters before testing, the filter temp was below 80F for the first four minutes of the low fire test run – see screenshot. Any ideas on how this might be addressed?

Thanks!
Lisa
